

Work history

I'm based in Kuusamo, Finland, and I enjoy creating simple, practical websites. My designs focus on clarity, usability and keeping things uncomplicated.

Reindeer CMS

Reindeer CMS is a lightweight content management system I created for building and managing simple websites without unnecessary complexity. The goal was to make everyday content editing straightforward, with a clean admin area and the essential tools needed to manage pages, media and site settings. I built Reindeer CMS around simplicity, flexibility and ease of use. It is designed to stay lightweight while still providing a practical foundation for personal websites, small business sites and other projects that need an easy-to-manage CMS.

LYHYT - Free Short Url

LYHYT is a free URL shortener I created to make long links easier to share. The idea was to keep everything simple: paste a link, shorten it, and get something clean and easy to use without unnecessary steps. I wanted LYHYT to feel lightweight, practical and straightforward. It focuses on doing one job well while keeping the interface clear and easy for anyone to use.
